

Cost of ownership

Surprisingly cost of ownership can range between £150.00 and £300.00 per year. Fax devices unnecessarily waste telephony resources and are often a dilution of investment and nuisance value for telephony managers. Those who deploy the latest IP Telephony will have to accommodate fax devices and items such as analogue telephony adapters simply to retain obsolete technology.

Is your current fax business process slow?

Adopting an electronic fax solution will speed up any processes involving the use of fax and introduce further efficiency by reducing time wasted by staff. It will retain the functions needed by staff, whilst at the same time eliminating obsolete technology and endure until fax is truly no longer required.

Are you at risk of security breaches with your fax?

Most organisations are obliged to comply with their industry governance rules, notably the public sector. There are risks of heavy fines from the Information Commissioner's Office as well as receiving adverse publicity when data is misplaced. Manual fax devices pose a significant risk and electronic fax all but eliminates that risk and provides a fully compliant audit trail.

Why DV02 for RightFax?

DV02 is an independent company founded in 2002 by experienced telecoms professionals who recognise that businesses need to do 'more for less', and get better value from their business telecoms investments

We provide voice and data solutions to medium and large businesses. Our difference is the way we work in partnership with IT and telecoms managers to solve typical problems.

RightFax

Efficiency and Productivity

Advanced routing features deliver faxes to and from network users, groups, folders, MFPs, and business applications.

Business Continuity

A wide range of options including virtualization support; automatic SQL Server failover; traditional Microsoft clustering; and our highly scalable Shared Services Module.

Performance and Security

The most reliable and robust fax server ever providing a highly secure platform for the private and legal exchange of documents and information.

Accessibility

Send documents from virtually any application with several delivery options: email, encrypted PDF, SMS or to an MFP device. Receive faxes on the desktop, email inbox, or other applications. Administrators can monitor your fax server from their mobile device.

Industry-leading Integrations

No matter what the environment is, RightFax can integrate with it. Our purpose-built integrations provide seamless interoperability with Microsoft, Cisco, SAP, Oracle, and Lotus environments along with leading MFP manufacturers and healthcare and financial services platforms.

Faxing Options

Create custom coversheets, signatures, phonebooks, library documents, and much more.

SMS Notifications

Send SMS messages to fax users and administrators to alert or notify them of specific RightFax events.

Inbound Fax Routing

Route incoming faxes a number of different ways including Direct Inward Dialling Routing support for inbound faxing only, Channel Routing, User Group Routing, Bar Code Routing and more.

Approvals

RightFax can be configured to hold outbound faxes for approval by an administrator before sending.

Billing Codes

Specify up to two customisable codes to track more information about the fax content, such as account numbers or billing numbers.

Fax Broadcasting

Send one fax to hundreds or thousands of recipients at once.

Reporting

RightFax has over 40 standard reports that can be run for fax reporting or create limitless custom reports based on your needs.

SMTP Email Gateway

RightFax includes an email gateway for SMTP/POP3 to send, receive, and manage faxes directly from any email client.

Web Client Access

A web client allows user to get faxes with just a web browser like Firefox®, Safari®, IE®, and Chrome™.

Fax Image Enhancements

RightFax processes incoming faxes to de-skew the image, adjust the image for proper reading orientation and de-noise the image.

DV02 Delivers
